

Sales Data Analytics Dashboard Using Tableau

Project Report

Name: Om Dipak Nathe

Branch: Artificial Intelligence & Data Science

University: Pimpri Chinchwad University

Academic Year: 2025–2026

Introduction

This project focuses on analyzing sales performance using Tableau dashboards. The objective of this project is to transform raw sales data into meaningful visual insights for better business decision-making.

The dashboard helps analyze:

- Total Sales
- Total Profit
- Total Orders
- Average Discount
- Sales by Category
- Profit by Region
- Monthly Sales Trends
- Top Selling Products

The project demonstrates the use of data visualization and analytics techniques for understanding business performance.

Tools and Technologies Used

Tool	Purpose
Tableau Public	Dashboard Development
Excel / CSV Dataset	Data Source
Data Visualization	Business Insights
Analytics Techniques	KPI Analysis

Dataset Description

The Sample Superstore dataset was used for analysis. The dataset contains sales transaction records including:

- Order ID
- Product Name
- Category
- Region
- Sales
- Profit

- Discount
- Order Date

The dataset was cleaned and processed before visualization.

Dashboard Overview

The dashboard provides a complete overview of sales performance through interactive charts and KPI cards.

KPI Analysis

The dashboard contains important KPI indicators:

- Total Sales: 2,297,201
- Total Profit: 286,397
- Total Orders: 5,009
- Average Discount: 1,561

These KPIs help summarize overall business performance quickly.

Dashboard Components

6.1 Sales by Category

This chart compares sales across different product categories. Technology category recorded the highest sales among all categories.

6.2 Profit by Region

This visualization represents profit contribution by region. The West region generated the highest profit.

6.3 Monthly Sales Trend

The line chart displays monthly sales growth over time. Sales showed continuous growth throughout the years.

6.4 Top Products

This chart highlights top-performing products based on total sales.

Insights from Dashboard

- Technology category generated the highest sales revenue.
- West region contributed the highest overall profit.
- Monthly sales trends indicate steady business growth.
- Certain products contributed significantly higher sales than others.
- Data visualization helped identify profitable business areas effectively.

Conclusion

The Tableau dashboard successfully transformed raw sales data into meaningful business insights. This project improved understanding of data analytics, dashboard development, KPI analysis, and visualization techniques.

The project demonstrates how data-driven decision-making can improve business performance analysis.

Future Scope

- Add forecasting models for future sales prediction.
- Integrate real-time datasets.
- Add customer segmentation analysis.
- Connect SQL databases for dynamic dashboards.
